- Write a program to convert entered temperatures to and from Celsius and Fahrenheit.

  Formula: C = $\frac{5}{9} \times (F - 32)$

- Write a program to calculate the electricity bill of your last month usage electricity unit which will be taken as user input using the following criteria:

Unit (watt)	Cost per Unit (BDT)
First 100	2
Next 100	5
After 200	10
After 500	25

- Write a program to check whether the last digit of an entered number greater than 100 is divisible by 3 or 5.

- Write a program to calculate the fare of any destination from IUB using bike or car based on the following formula:

  Bike fare =
  Booking fee + 15 tk cost per-KM + 3 tk cost per-minute wait + 1 tk surcharge per-minute

  Car fare =
  Booking fee + 25 tk cost per KM + 5 tk cost per minute wait + 2 tk surcharge per-minute

  Take necessary user input for doing the calculation.
